

## **Project ideas**

*Note: Not listed in any particular order*

1. **Food Market:** To develop an app where food orders may be made by Registered Food-vendors, bakeries and known home-based caterers. It takes advantage of Google's Geo location Pay-as-you-go API in identifying nearby suppliers/vendors. In addition to ready-made foods, it can serve as a bridge between farmers and homes by making orders for some uncooked food items.
2. **MyTailor:** A solution for fabric selection, clothing design selection (Trad and English inclusive), recording size/measurements details, obtaining fashion ideas, making customized clothing orders or selling used/unloved wears. It will make use of AI bots for outfit recommendation, tailor selection, as well as conflict resolution. It is targetted at markets such as Aba or for individuals that produce wears (shoes, sandals, clothes etc.) for distant customers (both in Nigeria and beyond). Some degree of quality checks (measurements and style selection) will be embedded.
3. **Waste Management:** A convenient solution for lifting waste from homes and offices. It also uses Google's Geolocation API to locate customers. A customer is at liberty to choose the pickup time too. It will take advantage of the Circular Economy Trend (easy fund raising) by providing incentives and managing recyclable waste items.
4. **NSETrader:** Takes advantage of the gaps in the current trading platforms in Nigeria. Most platforms lack modern trading features such as Stop Loss trades, Closed-market trading instructions, Futures Trading, Margin Trading, Graphical tools like Depth Analyser, Real time trading charts and lots of others.
5. **ProjectMon:** This solution focuses on Govt Project Implementation, it seeks to ensure transparency in handling of Govt. Projects by Monitoring government Project milestone payments across the country. Essentially focused on Educating the masses on ONLY Government Projects across all ministries, parastatals and agencies. Project implementation data such as pictures, quality tests and other details of ongoing projects will be compared with its project milestone payments. It addresses the questions "How much has been paid?" and "What has been completed?". **This is the real point where nations like Nigeria bleed profusely, not in budget allocation. Whistle blowing on these projects may also be included to empower citizens.**
